Conway, SC 29528

This workshop serves as an introduction to <OpenEditor>TM. Developed in 2004, <OpenEditor>TM is an XHTML editor that can also be extended to a number of other platforms, including PHP, ColdFusion and ASP. Written in Java 1.5, <OpenEditor>TM features functionality found in a number of commercial products such as FrontPage® and Dreamweaver®. The code is generated in XHTML 1.0 Transitional. Commands and functions of the package include:

- File
 - New (open a new file)
 - Save As (write as a new file)
 - Save (overwrite existing file)
- Edit
 - Undo
 - Redo
- Find
 - Find
 - Find Next
 - Find and Replace
- Tools
 - Page Properties (page title, link styles, text color, background color)
 - Edit DTD
 - Launch FTP
 - Open Validator (Section 508)
- Insert...
 - Tables
 - Page Refresh (automatically inserting meta-tags)
 - Page Redirect (automatically inserting meta-tags)
 - PHP (elementary tags and comments)
 - SQL (a collection of Structured Query Language statements)
- Preview
- Preview in default browser
- Options
 - Word Wrap (enable or disable)
 - Edit Font and Size

- Help
 - Tutorial (compiled CHM tutorial on XHTML development)
 - Help (compiled CHM help system on XHTML)
 - Visit Website <http://www.OpenEditor.org/>

<OpenEditor>TM is designed so that students are required to learn XHTML commands, along with providing editing capability found in expensive commercial products.
<OpenEditor>TM downloads are available from <http://www.OpenEditor.org/>
